3. Covinsky KE, Goldman L, Cook EF, et al; SUPPORT Investigators. Study to understand prognoses and preferences for outcomes and risks of treatment. The impact of serious illness on informal caregivers. As the Study to Understand Prognoses and Preferences for Outcomes and Risks of Treatment (SUPPORT) trial showed, the potential for loss of income by families of survivors of critical illness can be substantial. Although we did not investigate financial outcomes in our most recent article, we reported in an earlier study that up to 14% of caregivers stopped working in order to provide care for their loved ones.
